## Whitening Instructions

1. Floss and brush your teeth. Twist off the clear plastic cap from the syringe and replace with the mixing nozzle.
2. Place a small teardrop amount of gel in each tooth compartment in the tray. To guide you, the “gel drop” shown below represents the average size drop you should dispense into each tooth compartment. Remember this is a guideline only—if you have small teeth, use a smaller “gel drop.” Conversely, if you have larger teeth, use a slightly larger drop. **Do not overfill trays.**
3. Place the tray with the gel in mouth.
4. Remove excess gel with your finger or dry toothbrush. When inserting the tray, be careful not to push the gel out, but be sure that the tray is completely seated. You may see “bubbling” within your trays while wearing them. This bubbling is actually part of the whitening process.
5. Wear trays for 30 minutes, or less.
6. After whitening, remove and rinse trays with cold water. Hot water may damage the trays. If necessary, use a toothbrush to remove any residual gel. Place the trays in the storage case, and store them in a cool, dry place. Rinse and brush excess gel from teeth.

“gel drop”

Repeat steps 1-6 for each subsequent whitening application. For optimal results, whiten your teeth twice a day. If you experience mild sensitivity, wait at least one hour between applications.

### Ingredients:

Water, Propylene Glycol, Poloxomer 407, Hydrogen Peroxide, Glycerin, Carbamix Peroxide, Dicyetyl Phosphate (AND) Cetearyl Alcohol (AND) Ceteth-10 Phosphate, Potassium Nitrate, Silica, Hydroxypropylcellulose, Xylitol, Flavor, Monosodium Phosphate, Eugenol, Calcium Nitrate, Phosphoric Acid, Sodium Fluoride.
